TECHNICAL SKILLS

Languages	: Python, C, JavaScript	Version Control	: Git, GitHub
Frontend	: HTML, CSS, Tailwind CSS, HTMX, Alpine.js	Developer Tools	: VS Code, Postman
Backend	: Django, Django REST Framework (DRF)	Database	: ORM, MySQL, PostgreSQL

PROJECTS

Bookworm E-Commerce Platform (Django, Python, Razorpay, OAuth 2.0)

- Engineered a scalable e-commerce platform using Django 6.0 and Python, designing a modular architecture with 95+ endpoints handling catalog management, user accounts, and order processing.
- Integrated OAuth 2.0 Google Social Authentication via Django-Allauth alongside custom Role-Based Access Control (RBAC) decorators to secure user data and restrict administrative operations.
- Implemented Razorpay Payment Gateway integration with HMAC-SHA256 signature verification, server-side transaction logging, and automated payment status updates.
- Built a custom Admin Control Panel supporting complete CRUD operations across 10+ business entities including inventory, coupon engines, order lifecycle management, and user roles.
- Optimized search and filtering using complex Django ORM queries (Q objects, aggregations, annotations), session-based recent product tracking with 7-day TTL, and tax/shipping calculation rules.
- Integrated Cloudinary API for cloud image hosting and transactional email services (SMTP) for auto-generated order receipts and inquiries.

Blog Website (Django, Python, Cloudinary, RBAC)

- Full-Stack Web App: Developed a scalable blog platform using Python, Django, Tailwind CSS, and SQLite, architecting 23+ routes/endpoints for public browsing and backend management.
- Admin Dashboard & Security: Created a custom Admin Panel featuring full CRUD functionality for users, categories, and posts with Role-Based Access Control (RBAC) and secure authentication handlers.
- Advanced Querying & Search: Developed a multi-field search engine using Django ORM Q objects and deployed Context Processors for global site navigation and streamlined slug generation.
- Cloud Storage & Production Setup: Configured Cloudinary API for image hosting, WhiteNoise for static asset compression, and automatic deployment scripts (build.sh) for cloud hosting.

Bishwas-IT Solution (Django, Python, Razorpay, HTMX, Alpine.js)

- Architected Full-Stack E-Commerce & Hardware Service Platform featuring 99+ HTTP/REST routes structured across 9 modular Django applications (accounts, cart, store, services, admin, etc.).
- Engineered Guest User Session Cart & Seamless Auth Migration, allowing unauthenticated users to build persistent session-based carts, automatically merging guest cart items into authenticated user accounts upon login/registration.
- Delivered a High-Performance UI using HTMX & Alpine.js across 200+ HTML templates (300+ HTMX attributes), enabling SPA-like live search, infinite scroll, async cart updates, and instant checkout modals without full page reloads.
- Integrated Razorpay Payment Gateway & Invoicing with cryptographic HMAC signature verification, tax/shipping logic engines, promo code validation, and UUID-tokenized invoice access URLs.
- Established a Custom Admin & Operations Dashboard with real-time inventory stock metrics, order status workflows, customer CRM, hardware service lead management, and custom business analytics reporting
- Designed 18 Relational Database Models with optimized ORM queries (select_related, prefetch_related), slug routing, media offloading via Cloudinary, and failed search analytical logging.

EDUCATION

Vidya Vihar Institute of Technology, Purnia (Bihar)

Bachelor of Computer Applications (BCA) - 8.82 CGPA

2024 - 2027
